"I had to scrap one set." lay sighed. "I guess it's hack to square one on another. That's what I reckon I'll start today." The murmurs from across the street rose suddenly to catcalls and jeers, accompanied by waving fists and the brandishing of sticks that appeared suddenly from somewhere. Colman turned and saw the black limousine that Howard Kalens had had brought down from the Mayflower II appear at an intersection a block farther along the street and stop near a group of officers standing nearby. Major Thorpe detached himself from the group and walked across. Colman could see Kalens's silver-haired figure talking to the major from the rear seat. Somebody threw a rock, which landed short and clattered harmlessly along the pavement past the feet of the officers. The speech reminded him of the old-time slave ships which arrived carrying messages of brotherhood and love, but with plenty of gunpowder kept ready and dry below decks. Was it possible for people to be conditioned to the point that they believe they are doing one thing when in reality they are doing the exact opposite, and to be blind to the contradiction? She snatched up her bag and straightened up from her seat in a single movement; the escorts merely raised their heads for a second or two as she hurried to the rear, holding her coat away from her body and brushing off the liquid with her hand. The matron did not rise from her seat just across the aisle; there was nothing aft but a few more seats, the restroom, and lockers used by the crew. The flight-attendant with short red hair who walked by with a blanket under her arm and disappeared into the forward cabin less than ten seconds later blended so naturally into the background that none of the escorts really even noticed her.."Some of your mother's boyfriends??.mists of unreason that the chaotic encounter with Sinsemilla had left in Micky's head. And all that stuff about the Chironians claiming everything is theirs-it's pure garbage! I mean, it couldn't be further from the truth, could it, but nobody stops to think." He frowned to himself for a moment. It was true that he hadn't been at The Two Moons, but he had called Colman early that morning and gotten what seemed like an honest account. But with Jean acting the way she was, he didn't want to mention that. "Anyhow, the facts about the shooting are on record," he said. "All you have to do is ask Jeeves." Ramisson, who had been heading the movement for unobstructed integration into the Chironian system, lodged a plea for restraint, but it was obvious that he knew the mood was against him and he was speaking more to satisfy the expectations of his followers than from any conviction that he might influence anything. Later, if he lives, standing a short distance apart from the group in the opposite direction, Colman was becoming as fed up as the rest of them. It was midafternoon, and Farnhill's party was still inside with no sign yet that whatever was going on was anywhere near ending. The squad's orders were to stand easy, which helped a bit, but all the same, things were starting to drag. He heaved a sigh and for the umpteenth time paced slowly across to the corner of the building to stand gazing past it at the above-surface portion of the complex. Maybe dear Mater was fine, in spite of her performance. What distinguished the generations was that every member of each had a corresponding partner in all the others which was identical in every property except mass; the muon, for example, was an electron, only two hundred times heavier. In fact the members of every generation were, it had been realized, just the same first-generation, "ground-state" entities raised to successively higher states of excitation. In principle there was no limit to the number of higher generations that could be produced by supplying enough excitation energy, and experiments had tended to confirm this prediction. Nevertheless, all the exotic variations created could be accounted for by the same eight ground-state quarks and leptons, plus their respective antiparticles, together with the field quanta through which they interacted. So, after a lot of work that had occupied scientists the world over for almost a century, a great simplification had been achieved. But were quarks and leptons the end of the story? In the warm darkness. Too hardened to be moved by the plight of anyone else. With grim determination, angry with herself. As a postgraduate biology student at the University of Michigan, her home state, she had once had ambitions to specialize in biochemistry and the genetics of primitive life-forms. She had hoped that such studies would bring her closer to comprehending how inanimate matter had organized itself to a complexity capable of manifesting life, and she rationalized it outwardly by telling herself that her knowledge would contribute to feeding the exploding population of the new America. And then she had met Bernard, whose youthful zeal and visions of the
